ITALIAN TRADE AGENCY - ITA

ITALIAN TRADE AGENCY

ITA - Italian Trade Agency is the Governmental agency that supports the business development of our companies abroad and promotes the attraction of foreign investment in Italy. With a motivated and modern organization and a widespread network of overseas offices, ITA provides information, assistance, consulting, promotion and training to Italian small and medium-sized businesses. Using the most modern multichannel promotion and communication tools, it acts to assert the excellence of Made in Italy in the world.

TRADE AND INVESTMENT

OPEN DOORS TO WORLD
OF OPPORTUNITIES

Find Your Italian Partner

ITA - Italian Trade Agency supports the business development of Italian companies abroad, increases business opportunities, improves the image of 'Made in Italy', promotes industrial collaboration and foreign investment in Italy. Find your Italian partner is a business directory with virtual showcases of Made in Italy companies. We offer you an overview of Italian businesses, including company profiles, products images and details, website, business proposals and contact information. Foreign companies or agent interested in Italian products or looking for partnership with Italian companies, can access the database with the profiles, searchable by sector or product, and find a business partner.

CASEITALY

CASEITALY is a new and innovative format to promote the Italian companies of the building envelope and technical components. It has been developed by four benchmark Associations (ACMI, ANFIT, ASSITES, PILE), with the support and direction of FINCO Federation (Federazione Industrie e Costruzioni) and the decisive support of MAECI (Italian Ministry of Foreign Affairs and International Cooperation), through ITA (Italian Trade Agency).

CASEITALY symbolises the best of Italian production, values and qualities. It represents the sectors of windows, doors, gates, shutters, roofings, tinsmithery, technical curtains, flyscreens, sunscreen protection systems and components, safety harnesses and belts, façades and other sectors linked to construction.

With CASEITALY, the focus of the foreign operators attending BIG5 Dubai will be on the value of the “Made in Italy” of the building envelope, of thousands of companies and their operators that represent an excellence recognised (if not yet fully known) by the rest of the world.

CASEITALY

A small graphic of the Italian flag, showing the vertical stripes of green, white, and red, positioned directly below the word CASEITALY.

FINCO

FINCO - Italian Federation of Industries for Products, Systems and Services for Construction, Maintenance, Mobility and Cultural Assets and Heritage

As Federation Finco is not directly related to firms but to National Associated Organizations of Construction Sector. At the moment it puts together 40 Associations representing, among the others, the following fields: historical and monumental restoration, renewable energies (e.g. biomass, geothermal and hydroelectricity), doors, overhead doors, shutters, roofings, technical curtains, mosquito nets, external and sunscreen protection systems and components, safety harnesses and belts, metal carpentry, fireplaces and stoves for interiors, safety fire systems, fastening tools, sound barriers, scaffoldings, geognosy surveys, accident prevention signs, façades with integrated sunshade systems, metal sheet building pieces, solar shields, zenithal systems, curtain wall, aluminium and pvc windows, doors and gates, rolling shutter, loading systems, roofing systems, pluvial and gutters, condominium administration companies, remediation and asbestos removal services, parkland and landscaping companies (realization and maintenance), plant system suppliers, war mine clearance and other services sectors linked to construct

The Federation aims to increase the value and the visibility of each Federated Association. FINCO mainly operates when its action can be more effective than the single Associations operating alone, helping firms to get in touch with the international market.

FINCO operates on behalf of its own Association through:

- parliamentary and Ministerial lobbying for the adoption of laws and decrees in order to help the represented sectors: providing amendments in the general legislative procedures (for example the Financial Law and related measures); following and stimulating the Public Administration work in significant issues (e.g. the Inter-ministerial Decree about the CE marking on the building products);
- coordination and strengthening of the Italian producers of materials, equipment and services inside the construction sector;
- involvement in working groups on Ministerial issues, integrating and strengthening the weight of each Association;
- collaborations with public or private national or international organizations belonging to the building and infrastructural sector;
- organization and management of internal Working Groups to deal with the considerable issues of the Associations;
- supplying the Associations with Counseling Services through experienced subjects in different sectors;
- promotion of events which allow to expand the market of the building materials, services and equipment.

ACMI – ASSOCOSTRUTTORI CHIUSURE E MECCANISMI ITALIA

ACMI is the Italian Association that gathers the manufacturers of technical doors, windows and shutters for every type of civil and industrial application, in any type of construction and regardless of the material used for their making, as well as components and accessories to complement and integrate them.

The Association offers support in the issues of specific interest to the represented the market sector, keeping relations with public and governmental organizations, testing and research laboratories, standardization and certification bodies, Italian and foreign, in charge of the areas of interest of its members.

ACMI prepares and offers business consulting services helping its associates to achieve the qualifications needed for the production and marketing of products of their interest.

ANFIT - ASSOCIAZIONE NAZIONALE PER LA TUTELA DELLA FINESTRA MADE IN ITALY

ANFIT's main purpose is to promote quality windows conceived, designed and crafted entirely in Italy by Italian companies, inspecting and ensuring that strict quality, safety, environmental protection and energy savings criteria are met for consumer satisfaction.

ANFIT's goal is to protect the Italian quality market and production chain in compliance with the regulations. ANFIT's commitment is to the technical and qualitative improvement and upgrade of manufacturing, regardless of the material used. ANFIT carries out promotional activities at public administrations, professional studies and media in general. Its main purpose is to protect the Italian quality market and production chain abroad as well.

With a clear procedure, ANFIT determines the origin and quality of the product, thus enabling the end user to decide, independently and for their sole interest, on the purchase of windows made in Italy. This value must also be conveyed as best as possible to international markets, in order to support and increase the added value of such products.

ANFIT informs its Members of technical and regulatory updates, and takes part in the Italian and European decision-making processes that determine the rules of the market to protect Italian window manufacturers.

Services provided include: the use of the QUALITY ANFIT marking and Energy Label; issuance of certificate of origin; special rates for laboratory tests; technical information with respective seminars and training courses; insurance policy for manufacturers, installers and consumers.

ANFIT participates at events, fairs, conferences, and fosters promotional campaigns with press articles to disseminate the Italian-made ANFIT window. The top companies in the sector of window and window frame production and installation operate within this Association. The window frames sold in Italy are required to bear the CE marking, but manufacturing the window frame in Italy requires higher standards. The designer is required to verify that, before they are installed, window frames comply with a number of features such as wind resistance.

The NPD value (No Performance Determined) does not discharge either the window-maker nor the designer from liability: ANFIT helps reduce risk and liability ensuring window frames perform according to national and international regulations. ANFIT arose from the need to defend and enforce compliance with regulations that differ very much from one another due to the distinctive features of our country. The obligation for the CE marking for window frames arose to protect the consumer and standardise production processes, but does not eliminate the obligations and responsibilities of manufacturers. The window frames manufactured by ANFIT members bear the Numbered Energy Label and the Installation Label, to make the whole production chain traceable.

ANFIT is the first association in Italy to have stipulated two insurance policies with "Reale Mutua Assicurazioni" to protect and guarantee manufacturers/installers and consumers.

ASSITES – Associazione italiana tende, schermature solari e chiusure tecniche oscuranti

ASSITES' role is to represent the knowledge of blinds in their entirety – including solar shading, shutters, outdoor blinds, indoor blinds, and insect screens – in the national market and consumer perception. It actively works to spread knowledge of industry issues and to monitor market requirements, helping companies to meet them.

Qualified companies of any size – that manufacture and supply products and/or raw materials in the sector of solar shading, shutters, indoor and outdoor blinds, and insect screens – can become members of the Association. Additionally, professionals (technicians, consultants and scholars), sales agents or representatives and associations or industry bodies can also be part of the Association, as associate members and supporters.

ASSITES offers day-to-day assistance on industry entrepreneurship, and constant updates through news, information capsules and internal communications, monitoring trends and market developments at the national and international level and offering support to companies that wish to undertake a process of internationalization.

LIANA S.R.L.

Stand No. Ar D241

Since 1979 we have been producing soft and rigid profiles and gaskets in different plastics, applying technical processes which include co-extrusion, tri-extrusion and post-extrusion. We have progressed throughout our more than forty years' experience and today are a well-established benchmark for many international industries and distributors. 'From project to product' summarises perfectly our approach to customers' needs. One of our main strengths is the design and production of new custom profiles for a host of applications. Further, scrupulous control tests carried out at key points of the production cycle guarantee finished products of the highest quality. 'From project to product' summarises perfectly our approach to customers' needs. One of our main strengths is the design and production of new custom profiles for a host of applications. Further, scrupulous control tests carried out at key points of the production cycle guarantee finished products of the highest quality. We have recently expanded our skills also to the supply of plastic components produced by the injection molding process.
