Oklahoma has the 31st largest state economy by contribution to US gross domestic product (GDP). Over the five years to 2022, Oklahoma has experienced growth in its gross state product (GSP) and recently, Oklahoma’s GSP has recovered and exceeds the prepandemic total. Additionally, the state’s unemployment rate in July 2022 fell below the national average and the state’s prepandemic average. The state’s economic standing has resulted in population growth, which has been followed by job growth. Growth in Oklahoma’s population in 2021 outpaced the US, although this growth is largely centered around its largest city, Oklahoma City. Population growth, followed by job growth, in the city has led to a rising amount of diversification in the economy. Oklahoma and Oklahoma City have largely been characterized by reliance on the mining sector, but population growth has supported growth in the finance and insurance; professional, scientific and technical services; and healthcare sectors.

## Factors Impacting Oklahoma's Economy

### Housing Affordability Low Positive Impact

Over the past decade, housing costs in Oklahoma have risen at a faster rate than wages, contributing to a lack of affordable housing in the state. Rising housing costs are the most acute in Oklahoma City, where 40.0% to 50.0% of residents spend nearly half of their income on housing and the cost of a home has risen 14.5% between June 2022 and June 2021. Still, relative to the rest of the country, the average cost of a home in Oklahoma remains below the national average.

### Domestic Migration Low Positive Impact

Growth in Oklahoma's population has been relatively stagnant over the five years to 2022. Still, the state's population grew between 2020 and 2021, largely a result of domestic migration versus a natural population increase. This diverges from previous population trends in the state. Population growth from net migration occurred across the state and was not limited to just metropolitan areas and Tulsa, a rising tech hub.

### Business Climate Tax Index High Positive Impact

Oklahoma's tax climate is fairly hospitable toward businesses. While the state imposes a relatively low 4.0% corporate income tax, it does impose a throwback rule. On top of this, the state has an individual income and sales tax rate above the national average. To support new business growth in the state, Oklahoma does provide incentive programs. For example, Oklahoma's Small Employer Quality Jobs Program provides quarterly incentive payments to qualifying small employers for up to seven years.

### Fiscal Stability Moderate Negative Impact

Oklahoma has a structural deficit, meaning the state's spending exceeds its tax revenue, regardless of economic performance, and cannot finance long-term expenditures. Contributing to the deficit are its demographic makeup and rising medical costs. The largest share of Oklahoma's population is adults aged 45 and older. Thus, as the state's population reaches retirement, Oklahoma receives less tax revenue from a smaller share of the population to cover the rising costs of its older demographic.

### Sector Reliance State Specific Moderate Negative Impact

In 2021, the mining sector contributed the largest to Oklahoma's gross state product (GDP) in 2021, accounting for 8.4%. Historically, Oklahoma has relied on its production of natural gas and crude oil for its economic growth, as taxes generated from oil and natural gas production fund core services provided to residents. Reliance on this sector leaves the state disproportionately susceptible to fluctuations in oil production.

### Susceptibility to Natural Disasters State Specific Moderate Negative Impact

Oklahoma is ranked as one of the riskiest states for natural disasters. Natural disasters pose a significant threat to property owners in the state, as well as to businesses operating in the state, especially those in the agriculture sector. Property damages as well as lost business activity can create a substantial economic loss to the state.

## Gross State Product in Oklahoma

### GROSS STATE PRODUCT

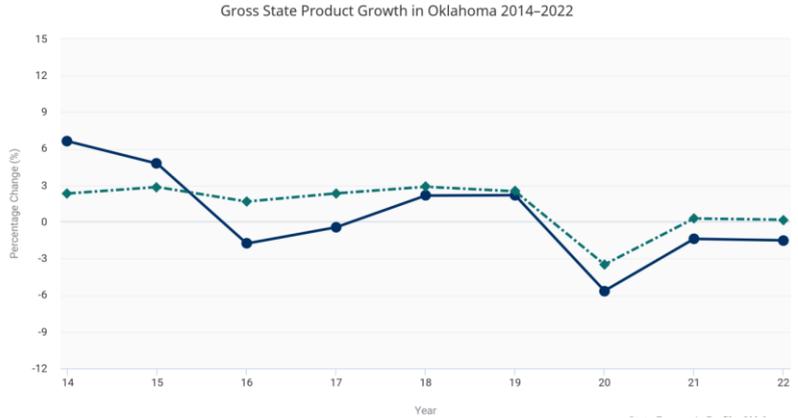

**\$197.0bn**

Growth Rate 2017-22 State Growth Rank

0.3%

42/50

Oklahoma, is the twenty-eighth-largest economy in the nation, exhibiting a gross domestic product of 197.0 billion, which has increased an annualized 0.3% over the five years to 2022. GSP is a measurement of a state's output, or the sum of value added from all industries in the state. It is a common indicator used to track the health of an economy.

## Population Growth in Oklahoma

### POPULATION

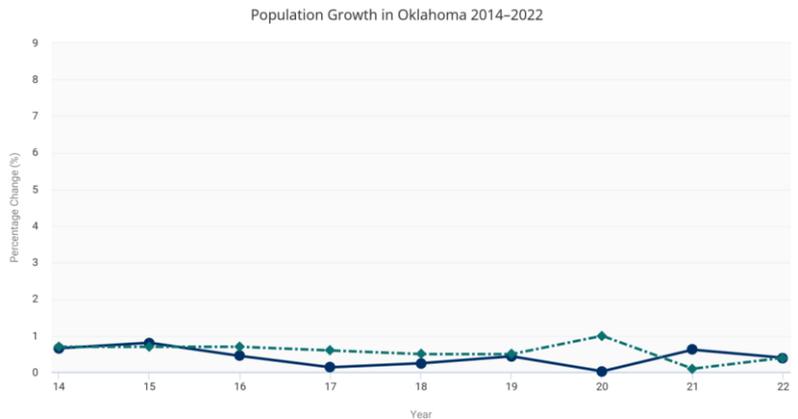

**4.0m**

Growth Rate 2017-22 State Growth Rank

0.3%

32/50

Over the five years to 2022, Oklahoma has exhibited an annualized population growth of 0.3% to reach a total population of 4.0 million.

# Industry & Sector Statistics

## Sector Statistics

The top sectors in Oklahoma by contribution to GSP are mining; professional, scientific and technical services; and information. Comparatively, the state's employment is most heavily concentrated in retail trade (9.9%) and healthcare and social assistance (9.9%). Notably, mining, the largest sector by GSP, only comprise 3.4% of the state's total employment. While Oklahoma is the fifth-largest producer of natural gas and the sixth-largest producer of crude oil in the United States, the state's reliance on the mining industry created additional challenges for Oklahoma's economy during the COVID-19 pandemic as oil prices plunged. For this reason, the state has sought to diversify its economy. Population growth and development in Oklahoma has led to growth in the professional, scientific and technical services sector. Statewide employment in the sector grew an annualized 3.5% between 2010 and 2020 and has been a leading contributor to growth in Oklahoma's GSP.)
