Italian Trade Agency - ITA

ITALIAN TRADE AGENCY

TRADE AND INVESTMENT

OPEN DOORS TO A WORLD
OF OPPORTUNITIES

ITA - Italian Trade Agency is the Governmental agency that supports the business development of our companies abroad and promotes the attraction of foreign investment in Italy.

With a motivated and modern organization and a widespread network of overseas offices, ITA provides information, assistance, consulting, promotion and training to Italian small and medium-sized businesses. Using the most modern multi-channel promotion and communication tools, it acts to assert the excellence of Made in Italy in the world.

FIND YOUR ITALIAN PARTNER

ITA - Italian Trade Agency supports the business development of Italian companies abroad, increases business opportunities, improves the image of 'Made in Italy', promotes industrial collaboration and foreign investment in Italy.

Find your Italian partner is a business directory with virtual showcases of Made in Italy companies.

We offer you an overview of Italian businesses, including company profiles, products images and details, website, business proposals and contact information.

Foreign companies or agent interested in Italian products or looking for partnership with Italian companies, can access the database with the profiles, searchable by sector or product, and find a business partner.

Sustainability is SustainabITALY

From reducing energy consumption to carbon neutral production, Italy is focusing on transforming its processes and plants across the country to become a greener and more sustainable country.

Italy's **Integrated National Energy & Climate Plan** aims to **achieve a 30% share of renewable energy, to reduce GHG emissions of 33% compared to 2005 levels** and to steadily reducing energy consumption by 2030.

When compared to the other European countries, **Italy is a leader in circular economy and is a champion of efficiency when competing on green matters and quality.**

In Europe, **Italy recycles more of its total amount of special and urban refuse than any other country (79.4%)**, above the European average (48.6%) and that of Germany (69.1%), France (66.2%) and Spain (48.7%).

A result that leads to an annual reduction in emissions amounting to 23 million equivalent tonnes of petrol and 63 million equivalent tonnes of CO₂. Thanks to the contribution of secondary raw materials recycled at national level as well as imported secondary raw materials and those internally recycled, the Italian manufacturing industry achieves a **circularity rate** (ratio between recycled secondary raw materials and the total amount of materials - primary and secondary - used) **of around 50%**.

With a score of 268 points out of 300, **Italy leads the way in Europe with its efficiency index for using resources.** An indicator that takes into consideration productivity when using raw materials, water, energy and the intensity of GHG emissions. A figure above the European average (147 points) and that of Germany (157), France (152) and Spain (142).

In the period between 2008 and 2019, Italy cut its use of raw materials on a par with production by -44.1%, compared to an EU average of -33%. Results linked to green investments: **a third of Italian manufacturing companies have made eco-investments over the last five years.**

Acquageo Service

ACQUAGeo Service was founded in January 2011, as a result of the initiative of its founder Juska Cudia who decided to start the Company during the peak of the economic crisis. After several years of experience in the business sector, working alongside his master Stefano Callori of Electrica Milly Company, still nowadays one of his prestigious partners, Juska believed it was time to throw himself into this enterprise' which was created to provide the best services to Drillers and Geologists from electromechanics, to thermo-hydraulics, to wells drilling, to geotechnics, by offering a wide range of products and services at competitive prices. The exclusivity of the brands and the immediate delivery of the products qualify ACQUAGeo Service as a flagship of the industry sector. Among the most prestigious Brands, we can mention: GRUNDFOS, LOWARA, XYLEM, FRANKLIN ELECTRIC, E-TECH, FOURGROUP, COVERCO, ELECTRICA MILLY, PLAFOND PLAST, DAB AND ZENNER

ACQUAGeo Service mission is to provide Drillers and Geologists with the best products and services by offering the products of the most prestigious Brands at exclusive prices. Customer satisfaction and the quality of the provided service are matter of primary importance for us for mutual trusting relations and reliability.

Air Clean SRL

Air Clean designs, manufactures and installs environmental rehabilitation plants, air depollution and related processes, biogas upgrading and purification, solid waste treatments plants, for industrial and municipal sector.

Our air and biogas treatment solutions include biological and proprietary bio-technologies and “conventional” chemical/physical technologies (Chemical washing, Activated carbon, Wet dust and Dry dust removal systems, Composting plant, etc.).

Regarding solid waste treatment plants the range starts from anaerobic digestion and biomethane production to very simple biodrying systems and completely automatic bridge cranes and aerated platforms.

Distributes green hydrogen electrolyzers ideal for power accumulation, including equipment for CO₂ methanation and for hydrogen and oxygen production into WWTP.

The access to the latest technologies and continuous research allows Air Clean to provide the best solution for every application, by using stand alone or multi-stage technologies.

Akuanet SRL

Born in 1962 from the intuition of founder Joseph Ermirio, who was one of the first in Italy to fully perceive the importance of water.

Thanks to almost sixty years' experience in the world of water treatment and to our qualified in-house technical department, our Group is able – with the wide range of products in our catalogue (most of which we manufacture) or through the design/manufacture of customized plants – to offer a complete response to all primary water treatment requirements for both domestic and industrial use.

Akuaril works through three divisions:

WATER FILTERS: We manufacture and market a complete range of products for domestic, civil and industrial use:

- anti-sand/sewage equipment and filters
- anti-scale filters and devices
- activated carbon filters and equipment for removing pollutants such as heavy metals and chemicals
- filters and equipment to purify and make water drinkable (reverse osmosis).

AKUABON – (Purifier and refrigerators): We supply water-coolers complete with pre-filtration for installation both above and below the sink, which can produce chilled, sparkling and still water at room temperature.

POLO POOL: We design and manufacture a wide range of specific items for pool water treatment such as filters, pumps, skimmers. We deal with innovative sterilisation systems with ultra-violet germicidal lamps.

Our offer covers a very wide range of users, from small above-ground pools to Olympic-sized pools and water parks.

Akuaril, with its brands covering the three divisions, is present in Italy through a qualified network of sales agents and a widespread network of distributors throughout the country. For some years now it has been exploring new markets with growing satisfaction.

Alfa Water SRL

Alfa Water Srl is an Italian company with a strong experience in the design and manufacturing of all types of manual and automatic screens filters.

We invested our collective experience in water filtration to produce world-class solutions and products in stainless steel, super alloys and advanced materials.

Beside our strong knowledge in water filtration, our designs and manufactures a wide range of screen filters for the removal of suspended solids from water. Research & Development with support provided by modern technologies of solid modeling and the use of selected materials plays a key role in our Company philosophy.

ALMEC S.p.A.

ALMEC designs and manufactures electronic control units, Plcs, operator panels, keypads, pushbuttons, radio transmitters (pushbuttons and consoles), radio receivers, telediagnosics, interconnection and satellite geolocalization systems, actuators, as well as angular safety sensors.

On the website www.almec.net there are presentations of all ALMEC products and it is possible to download the relevant technical data sheets.

ALMEC designs, develops and manufactures electronic boards and automation solutions specifically conceived for companies manufacturing medical devices and biomedical devices.

ALMEC is ISO 9001: 2015 certified. Its quality management system is certified by Bureau Veritas. ALMEC also studies, designs, develops and implements tailored automation solutions for its customers. ALMEC constantly invests in research and development and collaborates with various bodies towards continuous innovation.

The team of company technicians is characterized by high professional skills, strong creativity and energy.

Amenduni Nicola S.p.A.

Amenduni was one of the first companies in projecting and producing vertical and horizontal axe industrial centrifuges, nowadays it is the only company in the sector having the full control of all the industrial processes starting from the raw material.

The first stage of the production cycle of Amenduni is at Acciaierie Valbruna, where the special stainless steel is produced.

That material will be later used in Bari to produce Amenduni machines.

Atlas Filtri SRL

ATLAS FILTRI, A STEERING FORCE BEHIND THE WATER TREATMENT INDUSTRY

Atlas Filtri is a dynamic, flexible and modern manufacturing company designing, developing and producing components and systems for water treatment applicable to both domestic and industrial sectors. We have been established since 1975 achieving and creating an important position in our industry through constant dedication and attention to detail and innovation of products and materials.

As an Italian company, we are dedicated to engineering and designing our products in a true Italian style, each of which is internationally patented. Our products are each uniquely styled to provide simplicity of use, reliability and versatility. We are very proud to declare that all of our products are 100% produced in Italy and so reflecting the reputation we got all over the world.

In fact, the Made in Italy concept is the core value of our way of being.

We are dedicated to following closely all the steps leading to the product's realization. Starting from the innovative idea, our technicians design the product and prototype it. The realization of the mold then leads to a fully automated production process with persistent quality control to ensure the highest-level products with the lowest levels of refuse.

It is our responsibility to protect our world by keeping carbon emissions to a minimum and by producing as little waste as possible and our production strategy and material choice does precisely that.

BMB Technologies & Services is a company leader in the field of air treatment and abatement of pollutants coming from industrial processes. We design, build and install several types of abatement plants with particular focus on sustainability and quality.

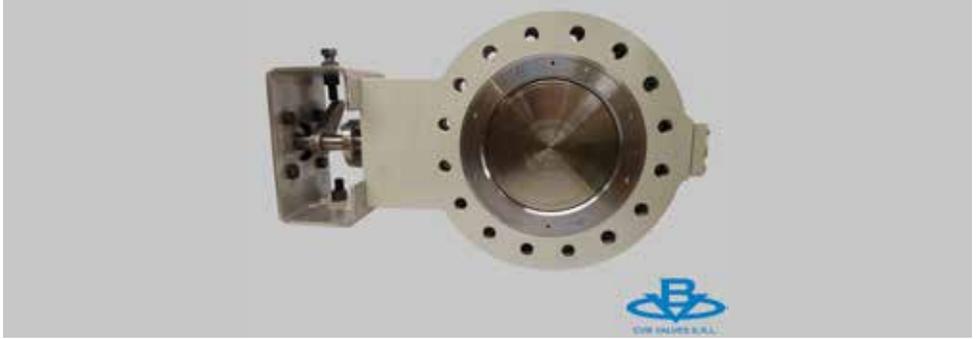

Our main goal is to contribute as much as we can to save our planet and mitigate climate change: our plants use natural and biological processes to clean the air and convert pollutants to harmless compounds; that's why "we choose nature to purify the air". Our plants are designed according to the latest rules and standards and can work without in a completely unmanned way.

We monitor all process parameters and we custom-made each supervision software according to customer needs.

Our brand new patented product called Photocatalytic filter is capable of purifying the air by means of solar light without the adoption of electrical sources or other kinds of utilities.

CVB Valves SRL

CVB, with more than 40 years of experience, is a preeminent manufacturer of engineered and tailor-made valves and equipment. The company is proud to be recognized for its history of technological innovation and its reputation for custom-engineered solutions for any Customers' challenges, combining reliability, efficiency, to deliver dedicated equipment to exceed the highest safety standards for the most extreme operating environmental applications. From 2014 CVB has been taken over by PARCOL SPA Group, while in 2019 has joined an ITALIAN FINANCIAL COMPANY named ZELZAR HOLDING with participations in many different engineering and manufacturing companies with laboratories dedicated to water district, ambient and petrochemical analysis. CVB is a premier supplier of Butterfly, Turbine bypass, Choke, Ball, Gate, Globe, Check, and Axial valves.

In 2022 CVB VALVES SRL signed a commercial partnership with Orion Valves S.p.A. for butterfly valves in water usage .

Our range of valves include usage of special materials and designs which are required to meet and surpass the needs demanded by the Oil & Gas, Energy, Water, and Naval industries.

All our valves are manufactured to meet our customers' technical, operational and safety requirements and are designed in compliance with the most recognized of International Codes and Standards such as API, ATEX, PED, CE, ASME, AWWA, NORSOK as applicable and/or required.

Easy SRL

EasyRFID is an Italian innovative company that manufactures custom RFID passive tags, provides RFID turnkey solutions and integrates labelling systems in production lines.

EasyRFID's production line comprises pick&place and transforming machineries, most of which were designed and built by its engineering team. Every process is internal, guaranteeing maximum production flexibility and speed, and managing to provide the most customized label tag maintaining the costs low.

For years EasyRFID has worked with waste container lead manufacturer both as RFID tag supplier and RFID management system provider. Finally, EasyRFID provides a complete solution for tracking waste, with optional blockchain certification of transactions, from the tag production and its application to waste container, to waste collection.

Elettromeccanica Viotto SRL

Elettromeccanica Viotto S.r.l. was founded in 1958, and is still family-run. It continuously expands its activity at the disposal of its customers both in Italy and abroad, constantly improving quality and professionalism, strictly adhering to delivery times and creating tailor-made solutions for each customer.

The company has consolidated experience in the construction, carpentry and machining sectors for the supply of complete plant machinery in the following sectors: steel, energy, chemical, petrochemical, nuclear.

In addition, the company is also involved in the construction of spare parts in general, the construction and overhaul of electric motors and electrical and electronic equipment, mechanical and electrical maintenance, the design and construction of precision components, mechanical machining and medium-heavy mechanical carpentry for industry.

The plant in San Donà di Piave, in the province of Venice, operates on a covered area of 15,000 square meters, where over ninety experts in the electrical and mechanical sectors work. The expansion and size of the new machinery meant that a second plant had to be opened about 800 meters from the main office.

Viotto also offers the market not only innovative and highly reliable products, but also an adequate after-sales service structured to guarantee the protection and functionality of its products.

EMEC SRL

EMEC has been part of Italian and global technological innovation for more than 35 years. We design, program and manufacture high quality systems for water treatment and chemical dosing, including a wide range of solenoid-driven, motor-driven and stepper motor dosing pumps, advanced chlorine dioxide disinfection systems, control systems, pulse emitting water meters, probes and accessories.

Our most advanced dosing pumps are equipped with display and electronic multifunction control and can be remotely controlled with ERMES, our exclusive online platform. Thanks to our production sites with vertical manufacturing systems, we stand out for delivering reliable products with the highest price-quality standards.

EMEC also assembles special all-in-one solutions for any specific application, like in swimming pools and for cooling towers.

We can customize all our products and also offer customized and complete all-in-one solutions to meet any customer's need: our customers are central, we focus on their needs and we offer them the best solution to ensure a solid and profitable relationship. On top of that, our customers can rely on our constant support leading up to and after product purchase.

Pre- and post-sales services address all of our customers' requirements and potential customization needs.

By offering reliable systems constantly up to date, our production meets a wide range of needs and several application fields, like swimming pools, Legionella prevention, food and beverage industry, animal farming, aquariums, hotels, spas, oil and chemical industry, industrial water treatment, potable water treatment, hospitals, cooling towers, fertigation and car wash.

Faggiolati Pumps S.p.A.

Faggiolati Pumps SpA, certified ISO:9001 e ISO:14001 works in the national and international field. It is specialized in designing and manufacturing submersible electric pumps, mixers and aerators with metallurgies that go from the lamellar graphite cast -iron to the austenitic 316 st. steel, Duplex, Hastelloy alloy up to the Bronze and its alloys.

To underline that all its metallurgies are certified and of Italian origin. The available hydraulic versions are: Drainage, Grinder, Single Channel, Vortex and high efficiency Multichannell.

Electric motors are all in Premium Efficiency IE3 class and, up to powers of 50 kW, are certified according to anti explosion legislation ATEX. We are currently completing certification UL/CSA (USA Canada).

Furthermore we supply special executions according to customer's projects, water aerators, oxygenators, mixers, electronic instruments and accessories for pumping plants.

Our assistance service (inner workshop and licensed service shops in the most part of national territory) is able to execute any level of servicing, to supply the original spare parts at a fair price and to hand the equipment over, hydraulically and electrically tested.

Logo of Gruppo Energia with tagline "live with energy..." and a tree growing from a stack of gold coins.

GRUPPO ENERGIA COMPANY is an Italian manufacturer of power equipment and electrical components, based in the north of Italy, in the famous industrial area of Brescia city, about 80 km from Milan.

GRUPPO ENERGIA has been established since 2000, starting from the beginning with the enthusiasm and the experience of an internationally known protagonist in the power factor correction and power electronic fields.

We are dedicated to making the world more energy-efficient, while helping our customers increase their savings and companies save resources by improving energy efficiency.

All our products are subjected to a very strict quality control from the first to the last step of the production process.

All products are made in accordance with European and international norms and regulations.

HP Watermakers

Founded in 1995, HP Watermakers manufactures a wide range of manual, semi-automatic and fully automatic watermakers able to produce desalinated water from 35 up to 10000lt/h using all the standard AC/DC voltages. The brand is ISO 9001 certified and produces 80% of the machine components in its 3,000-sqm facility on the outskirts of Milan, Italy, where up to 1,000 units are produced each year.

Throughout its history the company has pioneered and patented important technical innovations, from automatic pressure, the well-known RP TRONIC system, and automatic membrane conservation system to waste energy recovery systems. In 2019, for example, it launched HP BiBi®, a remote watermaker control system that extracts and records diagnostic data such as shutdowns, ignitions, work time, pressure and various alarms.

HP is also the first to develop its own proprietary interface, Part-NET, that is fully compatible with onboard electronic systems from brands such as Raymarine, Garmin, Furuno, Simrad, B&G and Lowrance. HP products are covered by a 3-year warranty for the automatic models and 4 years for the BiBi® tele-controlled units.

Hytek SRL

Hytek SRL, world leader in the marketing of products for the treatment of primary water, has been operating for over 30 years and is widely appreciated and recognized by the market and by the installation sector.

Hytek feels itself, somewhat ambitiously and not without pride, to be the bearers and finalizers of an increasingly demanding market voice that wants to have an added value on the products purchased at competitive prices.

It is probably for this reason that large producers, leaders in the water treatment sector, like Dupont, CodeLine, Pentair, Fedco and Suez have believed in Hytek, entrusting it with the distribution of their products and thus establishing a partnership on the highest level.

Is CLEAN AIR Italia SRL

Is CLEAN AIR has developed its technological breakthrough and innovative APA (Air Pollution Abatement) technology with the objective, since the start, to achieve the greatest air pollution reduction rate using sustainable and circular economy principles and the least resources and carbon emissions.

APA® is an intrinsically clean solution, responding concretely to the “nearly Zero waste philosophy” (it generates rain-water like as residual) and the “nearly Zero emissions principles” (consumption up to 7 - 10 times lower than the other competitor products and technologies) and savings for other applications at the service of equipments.

Indeed, APA technology uses only simple water and mechanical processes to reduce up to 99% of particulate matter and a wide range of chemical and gaseous pollutants in the air we all breathe.

The APA technology, which has 20 patents granted in the main industrial countries of the world and a wide operational know-how, does not use filters nor chemicals and has been certified for the ability to remove nanoparticles up to 20 nm (smaller dimensions than Sars Cov 2 - Coronavirus).

APA technology is versatile, flexible and highly scalable, applicable to a wide variety of environments, both for industrial applications and in urban spaces; in addition, the application methodology (cluster model) distributed in the spaces of use has also been patented, which allows APA to be used with a number of modular installations depending on the customer needs, even in large networks of air purification systems, both indoor and outdoor.

New Alfatel 2002 SRL

Bonding Communications Routers and Software.

Founded in 2002, New Alfatel is located in Italy, Rome and it distributes or builds multi line systems at high throughput.

Follow part of our solution:

- SANE software for update Teltonika router to bonding router;
- Bonding New Alfatel appliance on industrial pc;
- Celerway: high performance and availability balancing and light bonding routers;
- Viprinet routers: fast, reliable, cost-effective, and secure data connections—site-to-site, mobile, and portable. Your business-critical applications will stay online—anywhere and at any time!

New Alfatel 2002 presents at WETEX the Innovative Telecommunication System through disjoint link: Satellite, LTE (with international SIM inside), WAN etc.

The company introduced Multi-Line Routers in bonding e/o Balancing e/o Fault tolerance – with 5G Technology on board.

“Private” 4G and 5G Base-station to cover up large fields.

The company produces, on request, technological systems for agriculture 4.0 or on made bonding appliances.

New Alfatel builds and designs Security and audio video solution systems: Control Rooms and Media Rooms, Integrated Audio Video Systems – Anti-intrusion and video surveillance systems - Video Wall and Digital Signage Solutions – Sensors.

We can build all, on project, included personalized control software that command and control every kind of sensor: Serial and Ip controls, , relay, IR, etc.

Newster System SRL

Founded in 1996, NEWSTER SYSTEM srl, is located in Italy on the coast of the Adriatic Sea.

Our core business is the development of innovative and eco sustainable solutions for the management of medical waste on-site.

We are speaking about the treatment of potentially infectious solid waste as per our Newster NW sterilizers; the treatment of hospital waste water generated from infectious disease wards, Newster SWT SAFE WATER SOLUTION; the treatment of waste water generated during autopsies , Newster ASW AUTOPTIC SAFE WATER; the treatment of medical laboratory liquid waste, Newster OZONOTHERAPY; Air sanitation, Newster INGENICO.

All of our products can be installed in containers for a swift plug and run option.

Our company is present worldwide with more than 593 installations..You can check out our website at www.newstergroup.com and view our tutorials and videos on our YOUTUBE channel.

All of our products have one idea in mind : the opportunity for a “green hospital” with the necessary technology all under the same brand equipped with a unique software which provides preventive maintenance and a live connection: between machine and operator; machine with tech team; machine with hospital director.

You get to choose who can vision what : spacing from utility consumptions, to kg/processed, to maintenance schedule, to cycle log, machine certifications.

Our technologies are eco-friendly : we have no emissions into the environment. We follow the Stockholm Convention which prohibits the emission of UPOPs (unintentional persistent organic pollutants) .As we provide on-site technologies we drastically reduce the carbon imprint that would come with a service company treatment which involves the collection and movement of untreated waste from one location to another, also cutting out occasions for the transmission of germs and bacteria.

OCMI OTG S.p.A.

SINCE 1921 YOUR STRATEGIC PARTNER

QUALIFIED SOLUTIONS FOR THE TRANSMISSION INDUSTRY

The group was established in 1921 by Mr. Alfredo Gusti under the name of Gusti Alfredo SpA.

Since the very beginning the core business has been both the manufacturing and the engineering of mechanical components with a special focus on gears and transmissions.

A strong relationship with the Navy and the Railway industry was immediately established for the production of gears and gearboxes.

During 1977 OCMI was established. This company main business was and still is the engineering and manufacturing of glass machines.

In 1986 Gusti Alfredo SPA spin-off all its assets into a Newco named O.T.G. and also moved to a new premise in Milano (Via Venezia Giulia,7).

In 2005 OCMI and OTG merged into OCMI-OTG Spa and later that year they bought METI S.r.l.

SAER Elettropompe S.p.A.

SAER pumps, established in 1951 in Italy, produces pumps and motors which find applications in water treatment both for industrial and civil applications.

Climate change, demographic growth and water scarcity are creating new challenges, and desalination is becoming a crucial alternative to traditional fresh water resources.

SAER is ready to face these new scenarios with a strong and effective response: a full range available in duplex and super duplex.

In the last decade, SAER heavily invested in the research and development of optimal solutions for water treatment, increasing the flexibility of the pumps range, widening the offer through highly personalized products in order to meet customers' needs.

A range of end suction pumps, close coupled, high pressure pumps, split casing pumps and submersible pumps and motors, are now available in duplex and super duplex. The knowledge acquired from over 70 years of experience in the pump business has enabled the creation of pumps which can withstand harsh and corrosive environments, for a trouble-free experience.

The range also includes sewage surface and submersible pumps.
